POSITIVE PARENTING TIPS FOR CLINICIANS

Toni Whitaker, MD – Developmental Pediatrics

Alexandra Vohs, PsyD, NCSP - Psychology
OBJECTIVES

• Connect positively with parents about child development and behavior

• Encourage families to consider their own positive approaches to child development and behavior

• Be aware of available parenting resources for families

DISCLOSURES

• No financial disclosures.
POSITIVE CLINICAL CARE

• Focus today on transferable tips to child/family encounters that we have every day

• Our positive interactions with both children and parents help us provide better care

• All specialties and all levels
Kids need

- **Safe, Stable, Nurturing, Positive** Relationships and Environments that allow them to **THRIVE**

- We can help parents understand and provide these essentials
  - Building skills in parents supports skill development in their children
  - **NOTE** – think about who may need extra help or encouragement
    - Parents who experienced maltreatment during childhood
    - Parents who have fewer supports
    - Children with certain developmental and/or behavioral challenges
    - Who else?
Parents matter

• Parents are the experts for their own children
  • They are typically with the child the most
  • May need help to interpret behaviors or know what to do

• Parents are often highly motivated
  • 83% of parents from all backgrounds agree that good parenting can be learned.
  • 54% of parents wish they had more information about how to be a better parent.
  • 69% of parents say that if they knew more positive parenting strategies, they would use them.

• May not agree with your recommendations
  • Maybe there are factors you don’t know
  • One solution doesn’t fit all

• We can help parents locate and adapt resources to fit their needs
Where and from whom do parents get info on child developmental and behavior?

- TV, internet, family, friends, strangers
- Medical providers are a trusted source
- Childcare providers and teachers often know the child well

Radecki, et al (Pediatrics Vol. 124 No. 3 September 1, 2009, pp. 858-865). Top things parents wanted in a well-child visit, one was more behavior and development, and another was effective communication in the setting of a relationship. Hurried explanations of positive and negative reinforcement do not effectively change parenting practices.
What is Positive Parenting?

“Positive parenting is the continual relationship of a parent(s) and a child or children that includes caring, teaching, leading, communicating, and providing for the needs of a child consistently and unconditionally.” (Seay et al., 2014, p. 207)
The Benefits of Positive Parenting

- There is empirical evidence for numerous benefits of positive parenting:

<table>
<thead>
<tr>
<th>Benefit</th>
<th>Reference</th>
</tr>
</thead>
<tbody>
<tr>
<td>Improved attachment security among toddlers</td>
<td>Forgatch &amp; DeGarmo, 1999</td>
</tr>
<tr>
<td>Improved school adjustment among children</td>
<td>Forgatch &amp; DeGarmo, 1999</td>
</tr>
<tr>
<td>Increased compliance and self-regulation among children</td>
<td>Bornstein, 2002</td>
</tr>
<tr>
<td>Improved ability to resist negative peer influences among adolescents</td>
<td>Lochman, 2000</td>
</tr>
<tr>
<td>Lower dysfunctional parenting styles, and higher sense of parenting competence</td>
<td>Sanders, Calam, Durand, Liversidge, &amp; Carmont, 2008</td>
</tr>
</tbody>
</table>
Positive Parenting Practices

- Communicating with Children
- Responding to Behavior
- Active Listening
- Special Time
- Giving Directions
- Using Consequences
Communicating with Children

Tips for communicating with children:

1. Praise the child when he/she does something right.
2. Pay attention to the child when he/she is talking to you or trying to communicate with you.
3. Set aside time each day to talk and play with the child.
Responding to Behavior

• Praise
  • Providing attention to the child for something he/she has done that you like
  • Be specific! Labeled praise tells the child exactly what you expect/like
  • Hugs, high-fives, or pat on the back with labeled praise can give more power to your praise

• Imitation
  • Copy or mimic what the child is doing

• Description
  • Describe what the child is doing in as much detail as possible.
Active Listening

- Give the child your full attention
- Make eye contact and stop other things you are doing
- Reflect what the child says
- Get down on the child’s level
- Reflect or repeat back what he/she is saying and what he/she may be feeling to make sure you understand

Example

<table>
<thead>
<tr>
<th>Your child is:</th>
<th>You say:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Crying / Seems sad</td>
<td>“I can see that you’re upset.”</td>
</tr>
</tbody>
</table>
Special Time

- 5-10 minutes each day where the child leads the play
- Be consistent with special time
- Allow the child to lead the play
- Praise the good behaviors
- Imitate the child’s behaviors
- Describe what the child is doing
- Be enthusiastic
- Limit questions/directions/criticisms
- Ignore minor misbehaviors

CDC Essentials for Parenting
Giving Directions

1. Get the child’s attention
   • Be on the child’s eye level
2. Give the direction
   • Be sure the direction fits the child’s age
   • Tell the child the behavior you would like to see
   • Use a neutral tone
3. Check compliance
   • Make sure the child follows the direction
4. Add a consequence
   • Positive – labeled praise, hugs, high-fives
   • Negative – delay of privilege, time-out
Using Consequences

Consequences increase the behaviors you would like to see or decrease the behaviors that you do not like to see.

• Positive
  • Rewards
  • Praise
  • Attention

• Negative
  • Ignoring
  • Distraction
  • Natural Consequences (i.e., getting your child to focus on something else)
  • Delay of privilege (i.e., the child has to wait to get something they really want)
  • Loss of a Privilege “common sense consequences” (i.e., you take away a privilege)
  • Time-Out
What Positive Parenting Opportunities Did These Parents Miss?
ROLE of CLINICIANS
Use your POWERS

- Model for parents in your own interactions (w/parents & kids)
- Notice how the parents and child relate, communicate, play, solve conflict
- Be positive and respectful in your own interactions
- Your general and specific comments may be useful to families
  - *CAUTION - careless remarks may also be heeded and remembered
  - Fine to judiciously NOT comment on select behaviors or interactions, though be aware maybe construed as agreement

Encourage PARENT POWERS
Developmental factors are intertwined

• Promoting child’s developmental progress is an important input to and outcome of positive parenting.

HELP PARENTS RECOGNIZE DEVELOPMENTAL LEVEL AND OFFER TIPS THAT MATCH
POWER of OBSERVATION

• Awareness of child’s temperament - use positive words
  • Characteristics such as: sociability, activity level, emotional intensity, reactivity, persistence, frustration tolerance, etc.
  • Goal not to change a child’s characteristics, but to support child as needed

• Knowledge of child’s developmental skills

• Opinions on child’s needs and preferences
  • TUNE IN by respecting the child, be responsive and sensitive
**TUNE IN**

- Recognize temperament & personality
  - Emotional intensity and reactivity
    - Maximum delight, but watch out for tantrums
    - Example – child with tantrum after an item removed. Model calm redirection, noting that such intense feelings may be difficult for the child to label. Normalize with empathy when appropriate (can be hard for families!).
  - Frustration tolerance
    - Example – baby doesn’t seem to like tummy time. Notice when she stays on tummy even briefly, even if needs a bit of encouragement. Connect developmental level, even for babies. Suggest incremental changes.
4 Months - Lets you know if he is happy or sad
TUNE IN

• Recognize temperament & personality
  • Activity level
    • **CAUTION** – don’t offer or agree with words like “hyper” frivolously; couch in developmental norms when can.
  • Sociability
    • Tends to be shy or outgoing? Prefers a few/many friends?
    • Example – if shy, encourage & help join in play with others.
    • Helps to be on a child’s level if seems cautious/anxious.
  • Coping with change
    • Example – transitions can be eased with planning and announcements (vs. “warning”).
18 Months - May cling to caregivers in new situations
POWER of ATTENTION

• Child-directed

• Time IN
  • Give positive attention for good behavior
    • Praise, hugs, smiles, nods, listening, responding
  • Time it right, but be consistent and reliable
  • Example – in a challenging visit, notice when a child cooperates or stops a misbehavior even briefly and try to connect positively when that happens. If you have success and especially if parent notices, share the process and result. Pausing the visit briefly to make a connection can save you time.
POWER of PRAISE

• Effective praise:
  • Is specific (describes the behavior or portion of behavior that is appreciated)
  • Focuses on behaviors or effort over outcomes
  • Occurs as soon as possible following a behavior
  • Sounds genuine and positive
  • Can catch the child being good
  • Increases the chance the behavior will occur again
  • Makes the child feel good for what they have done

• Everyone should be able to find something positive to praise, even if small or it takes a bit of thinking!
  • Praise to parents for efforts, too!
2 Years - Shows more and more independence

cdc.gov/Milestones
POWER of ACTIVE LISTENING

• Active listening skills
  • Give full attention and respond thoughtfully
  • Get to the child’s level
  • Reflect back what the child says
  • Label emotions - state what the child appears to be feeling
    • Especially helpful to promote child’s own awareness and development of personal coping strategies
  • Use gestures such as touch, smiles
  • Example – ask the child about at least some part of the medical history or his/her impressions. This can be helpful to model for parents even for a younger child.
POWER of OFFERING CHOICES

• Increasing size and frequency of choices allows for growth in independence
  • Example – even small choices such as “which ear do I check first?” can be empowering to a child. Give choices that are pre-approved, and if compliance is needed, offer “opt-in” type choices. CAUTION – don’t set up “yes/no” from the child unless you’ll follow through exactly.
  • Example – child has limited variety in his diet, encourage child making some choices at the grocery store.
POWER of PLAY

• Use play for a great connection (and fun!)
  • Child-directed (when engaging in appropriate play)
  • Describe the child’s play
  • Keep being positive and use praise
  • Keep using active listening skills in communication
  • Use selective attention to encourage behaviors you want
to see and active ignoring of annoying (but not harmful)
behaviors
  • Example – especially if you suspect parent is not engaging
  in much positive play, model how it’s done and relate to
developmental levels. Appreciate reciprocal play between
parent and child.
18 Months - Shows interest in a doll or stuffed animal by pretending to feed
4 Years - Plays “mom” and “dad”
Developmental factors are intertwined

• Promoting child’s developmental progress is an important input to and outcome of positive parenting.

• Consider child’s development as a critical factor when recommending specific positive activities.

• Overall parental expectations should be based on developmental level. Normalizing skills and behaviors helps parents create reasonable expectations.

HELP PARENTS RECOGNIZE DEVELOPMENTAL LEVEL AND OFFER TIPS THAT MATCH
6 Months - Shows curiosity about things and tries to get things that are out of reach
9 Months - Puts things in his mouth
PROMOTE DEVELOPMENTAL MONITORING

• No matter the pediatric/early childhood profession, noticing and encouraging appropriate developmental activities can be helpful

• Everyday moments are plentiful and perfect for positive comments

• Know evidence-based resources for developmental monitoring
From birth to 5 years, your child should reach milestones in how he plays, learns, speaks, acts and moves. Track your child’s development and act early if you have a concern.

Positive Parenting Tips

As a parent you give your children a good start in life—you nurture, protect and guide them. Parenting is a process that prepares your child for independence. As your child grows and develops, there are many things you can do to help your child. These links will help you learn more about your child's development, positive parenting, safety, and health at each stage of your child's life.

Positive Parenting Tips for Healthy Child Development

Infants (0-1 year of age)

Developmental Milestones

Skills such as taking a first step, smiling for the first time, and waving "bye-bye" are called developmental milestones. Developmental milestones are things most children can do by a certain age. Children reach milestones in how they play, learn, speak, behave, and move (like crawling, walking, or jumping).

In the first year, babies learn to focus their vision, reach out, explore, and learn about the things that are around them. Cognitive, or brain development means the learning process of memory, language, thinking, and reasoning. Learning language is more than making sounds ("babble"), or saying "ma-ma" and "da-da". Listening, understanding, and knowing the names of people and things are all part of language development. During this stage, babies also are developing bonds of love and trust with their parents and others as part of social and emotional development. The way parents cuddle, hold, and play with their baby will set the basis for how they will interact with them and others.

For more details on developmental milestones, warning signs of possible developmental delays, and information on how to help your child's development, visit the "Learn the Signs. Act Early." campaign website. http://www.cdc.gov/ncbddd/actearly/index.html

Positive Parenting Tips

Following are some things you, as a parent, can do to help your baby during this time:

- Talk to your baby. She will find your voice calming.
- Answer when your baby makes sounds by repeating the sounds and adding words. This will help him learn to use language.
- Read to your baby. This will help her develop and understand language and sounds.
- Sing to your baby and play music. This will help your baby develop a love for music and will help his brain development.
- Praise your baby and give her lots of loving attention.
- Spend time cuddling and holding your baby. This will help him feel cared for and secure.
- Play with your baby when she's alert and relaxed. Watch your baby closely for signs of being tired or fussy so that she can take a break from playing.
- Distract your baby with toys and move him to safe areas when he starts moving and touching things that he shouldn't touch.
- Take care of yourself physically, mentally, and emotionally. Parenting can be hard work! It is easier to enjoy your new baby and be a positive, loving parent when you are feeling good yourself.
Parenting is hard work! But it can also be fun and rewarding. There are many things you can do to help build a safe, stable, and nurturing relationship with your child. This website will help you handle some common parenting challenges, so you can be a more confident parent and enjoy helping your child grow.
READING
READING

- Is critical for language and other development
- Shared reading has many additional benefits

Early Shared Reading Is Associated with Less Harsh Parenting

Jimenez, Manuel E. MD, MS, FAAP*; Mendelsohn, Alan L. MD†; Lin, Yong PhD‡; Shelton, Patricia§; Reichman, Nancy PhD※; 

doi: 10.1097/DBP.0000000000000687
Original Article
A little more than half (~58%) of young children were read to most of the days of the week.
READING TIPS

• TV’s mostly off (seriously!) per AAP recommendations
  • <18 months, avoid use of screen media other than video-chatting
  • 18 to 24 months can consider introducing high-quality programming with parents watching it with their children to help them understand what they’re seeing
  • 2 to 5 years, limit screen use to 1 hour per day of high-quality programs with parents co-viewing to help children understand what they are seeing and apply it to the world around them
  • 6 years+, place consistent limits on the time spent using media, and the types of media, and make sure media does not take the place of adequate sleep, physical activity, etc.

Media-free times and media-free locations at home.

Ongoing communication about online citizenship and safety.

AAP, 2016
READING TIPS

• Screens for reading – just as good? Maybe not.
  • Munzer, et al (Univ Michigan) found that both parents and toddlers engaged in more frequent social control behaviors and less social reciprocity when reading tablet-based vs print books. “Parent-Toddler Social Reciprocity During Reading From Electronic Tablets vs Print Books”, *JAMA Pediatrics*. November 2019; 173(11);1076-1083.

• Books are fun!
  Example – model by having books present and sharing with a child, ask about reading at home, comment positively if you see it happening, and play along. Can suggest telling stories about pictures in books if needed.
• National program to promote reading aloud to young children as a daily routine.
• Integrates reading into pediatric practices, advises families about the importance of reading with their children, and shares books that serve as a catalyst for healthy childhood development.
• 6,100 program sites, serving children in all 50 states across urban, suburban, and rural communities.
